

The Straight Shooter SS12 is the feeder you've been waiting for!

The SS12 easily handles a wide range of media types and sizes, from business cards to 12" wide catalogs... and feeds them all straight!

The Straight Shooter's unique features make hard-to-feed media a breeze, including:

- Stuffed Envelopes
- Open ended booklets
- Calendar
- Magnets
- Self-mailers
- Plastic Cards or Tags
- Labels
- Even Cds

Straight Shooter takes friction feeding to a new level with these exclusive features:.

**Repositionable Feed Belts:** Allows you to customize the feeder for every job and allows you to put the belts where they are needed the most, at the edge and the middle of the media.

**One-piece paper guide,** that goes all the way through the machine:  
Every piece feeds straight

**Paper Guides** that descend below the surface of the feed belts:  
Pieces won't slide out from underneath the guides, like other feeder!

**Dual, independently adjustable paper separators:** Enables you to put each separator where you want! Each separator can also be set independently for pieces of varying thickness.

**Buckle Separation:** Our separators are placed between the belts, not over the belts or over a roller like other machines. This takes away the high friction "nip" point common on other feeders.

**10 Minute Belt Replacement:** Our exclusive "Drop in Shafts" makes changing belts a breeze for anyone!

Reversible Back Wedge: Easily handles anything from business card sizes to 15" long piece

Oversize, Heavy Duty Shafts and Bearings: 5/8" thick shafts and large bearings for extremely long life!

Simplified Drive Mechanism: Fewer parts means less to worry about! Built for heavy use.

### **Buckle Separation Technology**

Buckle Separation Technology eliminates the high friction "nip" point common on other feeders. It allows for smooth feeding without the jams, plus increases the belt and separator lives! Nip points cause jams and peel back the top layers of multi-layered media, but not with the Straight Shooter! Our exclusive Buckle Separation Technology separates without pressure and allows for a variation of thickness in feeding the media, even within the same stack!

### **Specifications:**

- Paper Sizes: 3" (wide) x 2" minimum, 12" (wide) x 17" max. (custom size)
- Thickness: Single sheets to 3/8" thick
- Power requirements: 120 VAC
- Speed: Variable, up to 50,000 per hour
